

ISS and Human Research Project Office Highlights January 8, 2010

ISS Research Program

Installation of LMM continues on ISS.

During Voluntary Science on (Saturday) January 2, 2010, ISS Flight Engineer T.J. Creamer installed the (10x and 50x) objectives, the X-Y stage, surveillance camera, AFC faceplate with gloves, and test target. We estimate two more sessions are needed to complete the installation of the hoses and cables. The next session is scheduled for next Saturday. We are planning power up in late January.
